European Mining Summit 2026

Bringing together the growing European mining industry
under one roof with a proven track record from BTCHEL.

EMS
European Mining Summit

The Problem

The Mining Industry has a PR problem. It's still a young field and the business landscape has faced uncertainty.

The European Mining Summit (EMS) will change the public perception and the business landscape for the better.

Solution:

EMS

European Mining Summit

BTCHEL 2025 focused heavily on mining, as we believe it is key for energy transformation in the Nordics, but also across Europe. This year, we're introducing European Mining Summit, a professional industry event dedicated solely for mining. EMS is the must-go business event for miners.

Target Audience

EMS is build by Miners for Miners in Europe. We aim to bring together everyone from the mining sector from miners, hosting providers, infrastructure builders, ASIC manufacturers to pools, energy producers, heat distributors and regulators.

Case Study: The Energy Summit

in 2025 BTCHEL hosted a private, invite-only event for the finnish energy industry, together with Nordblock.

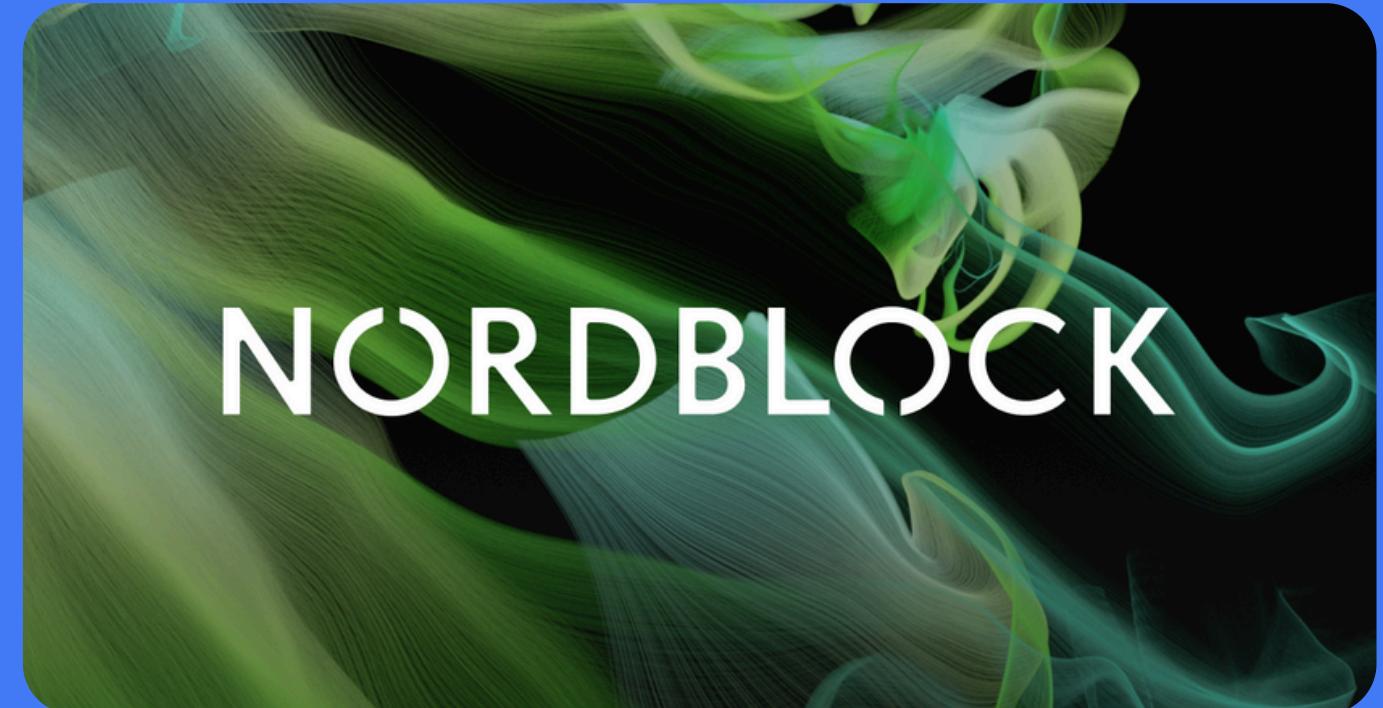

We learned, that it is difficult to combine a bitcoin conference and a mining event so we launched European Mining Summit.

Case Study: Government Roundtable

After having two sitting representatives from the Finnish Government on stage at BTCHEL, the ministry of Economic Affairs invited us together with other industry representatives to a roundtable setting to talk about how the government could help facilitate growth in the field.

The CEO of BTCHEL, Remu Karhulahti gave a talk about the benefits of mining, heat re-capture and grid stabilization to Sakari Puisto, Minister of Economic Affairs.

The circular table of crypto technology was considering the future of the industry in Finland

Ministry of Economic Affairs and Employment, Ministry of Finance
3.10.2025 12:40 PRESS RELEASE

"New business models based on crypto technologies are revolutionizing investment and payment and related businesses. Crypto assets can, on the one hand, be speculative investment targets and, on the other hand, in some cases already comparable to money. Alongside bank-centred systems, new methods of paying and signing contracts based on crypto technology are emerging. These have both opportunities and risks," said Minister of Economic Affairs Sakari Puisto in a round table discussion on crypto technology and its applications in Helsinki on 2.10.2025.

Case Study: Mainstream Media Perspective Shift

After BTCHEL 2025, The mainstream media clearly had a perspective shift towards bitcoin and mining. For the first time in years, some of the published articles had a positive outlook in the topics.

The BTCHEL article in Helsingin Sanomat, the biggest newspaper in Finland, was noted as the most viral article of the week.

Bitcoin miners now love Finland - Here are the reasons

The cold climate, cheap electricity and a stable main grid attract bitcoin miners to Finland.
